

ARISTA

Edge Threat Management

Arista Edge Threat Management

Arista Edge Threat Management takes the complexity out of network security—saving you time, money, and frustration. Get everything you need in a single, modular platform that fits the evolving needs of your organization without the headaches of multiple point solutions.

Edge Threat Management

Edge Threat Management provides IT teams with the ability to ensure protection, monitoring and control for all devices, users and data across one or multiple locations. By providing a consistent security posture across the entire corporate network, IT administrators can control the entirety of dispersed networks. Edge Threat Management spans on-premises, cloud and hybrid cloud environments.

Edge Threat Management brings together a full range of different networking security and optimization components to meet the needs of connected organizations, from core to cloud to network edge.

NG Firewall

NG Firewall simplifies network security with a single, modular, software platform that provides a browser-based, responsive, and intuitive interface enabling you to quickly gain visibility into the traffic on your network. NG Firewall delivers a comprehensive, enterprise-grade network security platform including content filtering, advanced threat protection, VPN connectivity, application-based shaping for bandwidth optimization.

Micro Edge

Micro Edge with advanced routing capabilities and WAN Optimization, provides the ability for businesses to build a comprehensive, secure network at a fraction of the cost of enterprise solutions. Micro Edge provides interoffice connectivity, optimizes the internet over existing infrastructure, and prioritizes business critical applications to maximize employee productivity.

ETM Dashboard

ETM Dashboard gives administrators the ability to manage network traffic across locations simply and easily from a cloud-based console accessible from any browser. ETM Dashboard makes it easy to manage your NG Firewall or Micro Edge appliances remotely. You also get visibility to the devices that are connected to your networks, giving you end-to-end control over what's happening.
