

HORNETSECURITY

Making your emails safe

Hornetsecurity Services

Spam and Malware Protection

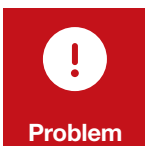

Spam accounts for over 50% of all email traffic and is the most intrusive method cyber criminals use to inject malware and viruses into corporate systems. A high unwanted volume of emails can also affect employee productivity, costing in time and productivity.

Hornetsecurity's Email Spam Filter and Malware Protection Service offers a 99.9% guaranteed spam detection and 99.99% virus detection. The Spam Filtering Service protects mail servers against Spam attacks and phishing emails.

Advanced Threat Protection

Professional cyber-attacks via email are very difficult to detect, forged invoices and fake application emails are the most popular methods used by cybercriminals to smuggle malware into corporate systems. These hacks can cause considerable (financial) damage to the companies targeted.

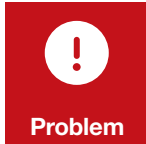

Advanced Threat Protection offers an additional layer of protection to your email server meaning, incoming emails are examined in great detail for certain content patterns that indicate malicious intentions. This includes, sender reputation, payment requests or requests for personal data.

Contact Brigantia

Unit 7, College Business Park, Kearsley Road, Ripon, North Yorkshire, HG4 2RN

Archiving

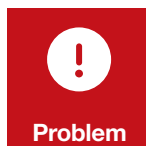

Business emails often contain vital company data and intelligence within. Process, agreements, contracts can be all contained within emails. Ensuring these emails are stored safely for every user within your organisation is crucial for data protection and compliance.

The **archiving service** allows you to capture an accurate and unmodified copy of each new message at the time it's sent or received and keep it for as long as needed without the risk of deletion or corruption.

Email Encryption

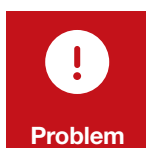

Business emails often contain in-house, personal or other sensitive content that could be intercepted and accessed without authorization if inadequately protected. It is vital that emails can be protected whilst in transit.

The **email encryption service** allows you as a user to Encrypt confidential information in email communication effectively and securely.

Signature and Disclaimer

Every outgoing email from your company is commercially important and can give insight to your network about your business. A uniform and legally compliant appearance is therefore a basic requirement for all employees.

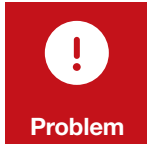

The **signature and disclaimer service** allows you to create consistent email signatures and email disclaimers for your entire organization quickly and easily. You have the ability to design group-based email signatures and disclaimers that add compliance functions to your external corporate communications and highlight your messages creatively and individually.

Contact Brigantia

Continuity

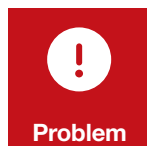

Email data exchange is the primary business communication platform used by nearly all companies. However, power outages, hard disk crashes or other damage can cause email traffic to fail and a loss of service.

The **Email Continuity Service** is activated immediately when it detects an outage. Emails are delivered without interruption by an alternative method. Access to secured emails is maintained and preserved during and after a failure.

365 Total Backup

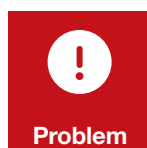

As Microsoft 365 is a communications system rather than a data protection product, it does not include native options to back up and recover data. This means that it is your company that is responsible for protecting itself against data loss.

The **365 Total Backup** service offers a backup and recovery solution for the whole Microsoft365 infrastructure including Microsoft 365 mailboxes, Teams Chats, OneDrive for Business accounts, SharePoint document libraries, and endpoints.

VM Backup

System errors, hardware failures or cyber-attacks with viruses, malware or ransomware can all lead to data loss and noncompliance, putting your company data at risk.

Hornetsecurity Altaro VM Backup offers a backup and replication solution for Microsoft Hyper-V and VMware virtual machines (VMs) and physical Windows servers, to protect against enterprise data loss.
