

Vulnerability Management Fit For Tomorrow's Threats

## The Prism Platform

Regular vulnerability scans are an essential part of protecting businesses of all sizes against potential security breaches. By identifying potential vulnerabilities before attackers can exploit them, you can reduce risk and maintain compliance with industry standards.

Failure to perform regular vulnerability scans can lead to financial losses, reputational harm, and legal liabilities. Businesses typically do not perform regular vulnerability checks due to a lack of awareness, budget constraints, limited resources, or a fear of discovering vulnerabilities. To stay ahead of potential threats and protect your clients' bottom line, prioritise cybersecurity measures and invest in regular vulnerability scans.

The Prism platform has been developed by experienced penetration testers and IT security leaders to reimagine, transform, and modernise vulnerability management. Prism not only eliminates the need for spreadsheets, PDFs, and manual processes; it also makes it simple for MSPs and IT teams to consolidate the threat landscape for their clients and implement agile, streamlined, and data-driven remediation.

# How Prism works

## Prioritise

- Integrates with exploit resources to add context to issues
- Notified as soon as an exploit becomes available that could be abused
- Assign priority ratings to assets so that you can easily identify the most important ones

## Remediate

- Integrate with ticketing systems
- Improve collaboration between colleagues and testers
- Receive real-time test updates
- Simplify project management

## Re-Assess

- Set and measure SLAs, as well as monitor compliance
- Allow Prism to mark issues as resolved on your behalf

## Analyse

- Clearly visible key insights, including number of exploitable issues
- Trending data across your digital estate
- Prism automates reporting by providing useful charts and graphs
