TRILLION

Keep your customers' infrastructure protected with Trillion™

Trillion™ is a breached account mining platform that continuously tracks, correlates and analyses billions of stolen usernames and passwords, hunting for digital identities that could belong to your customers.

Trillion™ is a natural extension to your existing Managed Service Portfolio

Do you think the CEO of your most important client would be impressed by your ability to warn them about employee usernames and passwords being shared by criminals? Where have they got them from? What they were? Do you think your client will think that is a valuable service? We do.

If you're supplying IT services to your clients, we know you'll recognise the need to stand out. You need to find competitive advantages to ensure your customers remain satisfied with the services you provide for them and that you're always thinking one step ahead.

Trillion™ can give you that edge by providing unique cyber security capabilities that provide instant value to your customers by protecting their businesses from the real and growing danger of leaked credentials.

Trillion™ has been designed for today's Managed Service Provider

Massive scale
Trillion™ constantly monitors the billions of account credentials passing through dark markets and criminal forums, looking for the few hidden accounts that might affect your customers

Crowd co-operation
Trillion™ lets employees play their part in securing your customers by letting them help determine the validity of their own leaked information, and the potential impact it might have on your IT services

Intelligent analysis
Trillion™ does a lot more than just locate stolen credentials. Our intelligent risk engines identify which leaked usernames and passwords have the greatest potential to result in corporate damage

See what matters
Without the right tools monitoring breach data can be exhausting. That's why Trillion™ makes it easy to sort through it, by providing data filters and automatic live account detection

Secure by design
The management of business threats is perfectly balanced with the protection of user privacy because security is at the heart of what we do. That makes us trusted by some of the world's biggest brands
