

## Key features

- **Centralised management**
- **MX email threat protection**
- **Microsoft 365 backup & recovery**
- **Entra ID backup & recovery**
- **DNS filtering**
- **ICES email threat protection**
- **Security awareness training**
- **Email archiving**
- **Email encryption**

## About CyberSentriq

CyberSentriq delivers an integrated, multi-tenancy cybersecurity platform designed to help protect data and infrastructure across on-premise, cloud environments and SaaS applications. The unified platform simplifies management, reduces complexity and offers enterprise-grade protection across complex infrastructure.

## Why we partner with CyberSentriq

CyberSentriq gives partners the ability to add a layered, integrated solution to their offering. The platform provides scalable security across multiple clients and environments. With built-in multi-tenancy, automated reporting and white label enablement, you can effectively protect clients and deliver value through a platform trusted by 1000s of MSPs.

## The challenges CyberSentriq solves

CyberSentriq consolidates critical security capabilities into a single platform, enabling MSPs to standardise protection across endpoints, email, cloud infrastructure and SaaS applications, from Microsoft 365 and Entra ID to Azure and Xero.

The platform provides layered protection against ransomware, phishing and email threats alongside secure backup, immutable recovery and zero-trust principles – all helping to reduce operational overheads and accelerate recovery after incidents.
