- **Built-in compliance controls**

- **Full digital audit trail with eSigning certificates**

- **Reduces manual entry, formatting and administrative errors**

- **Enhances brand consistency and professional presentation**

- **Enables recurring revenue opportunities for Channel Partners**

About Doc2

Doc2 transforms how organisations create, manage and sign professional contracts. Designed to streamline both drafting and eSigning, Doc2 converts existing Word templates into accurate, compliant, ready-to-sign documents in seconds.

Guiding users through a simple question-based process, Doc2 automatically generates correctly formatted contracts and documents using approved templates and verified data from Companies House and CRM systems.

Why we partner with Doc2

Contracts, SLAs, NDAs and employment offers are all key business documents that must be accurate, compliant and professionally presented, but they are often time-consuming and prone to manual errors. From document creation through to secure eSignature, Doc2 provides an end-to-end document solution in one platform.

Unlike traditional eSignature platforms that rely on static PDFs created elsewhere, Doc2 is a complete document generation and signing solution that improves workflow efficiency, reduces risk of incorrect information being used and enhances brand consistency.

The challenges Doc2 solves

All businesses require the use of contracts and professional documents, and no matter the size or industry, documents need to be accurate, up-to-date and compliant with current regulations.

Many organisations still create documents manually, copying and pasting data from systems and previous templates, which takes time and is easy to make mistakes. Doc2 eliminates inefficiencies by:

- Converting approved Word templates into finished, correct and up-to-date documents
- Automatically pulling verified company data from Companies House or CRM systems
- Generating compliant, branded, ready-to-sign documents in seconds
