

## Leading password and privileged access management

### Why partner with Keeper?

Trusted by thousands of companies worldwide, Keeper protects millions of people through its AI-enabled cybersecurity platform. Keeper unifies key components of Identity Access Management and enables zero-trust transformation, securing every user, device and privileged account.

### Challenges Keeper solves

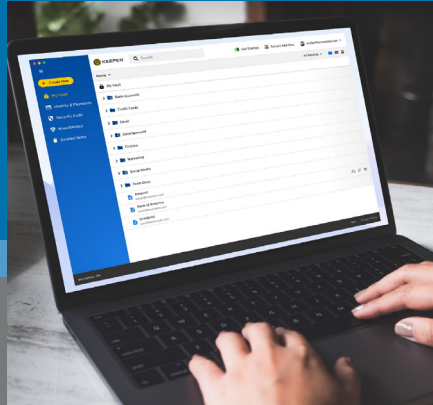

Weak password management is a huge risk to every organisation. Keeper simplifies password management, allowing users to create and store credentials across unlimited devices. It protects passwords, passkeys, secrets, connections and privileged access and the zero-trust, zero-knowledge architecture encrypts data only at device level for maximum security.

### KeeperPAM

KeeperPAM extends the platforms capabilities to privileged accounts, enabling granular control and continuous monitoring. Organisations can reduce attack surfaces, ensure compliance and deliver scalable, enterprise protection through a single platform.

### Opportunities for MSPs

Become a trusted cybersecurity advisor to your clients with one of the world's leading password and privileged access management platforms. Keeper allows you to deliver enterprise-grade password and privileged account security, simplify compliance and reduce client risk – all through a scalable billing model.

## Key features

- Securely manage, protect and store credentials, secrets and more
- Generate new revenue streams
- Enhance compliance and reporting
- Flexible billing model

## KeeperPAM

- Automated password rotation for service accounts and privileged credentials
- Multi-cloud and infrastructure support across clouds, on-prem systems and client environments
- MFA enforcement and continuous monitoring with granular control
