

# Automated compliance for Cyber Essentials

## Why CyberSmart?

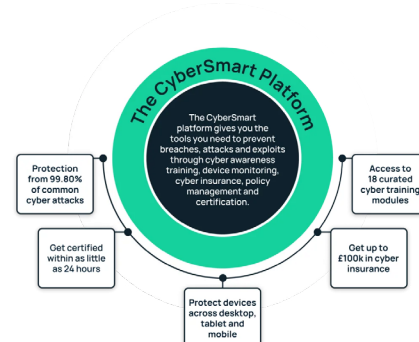

CyberSmart makes achieving cybersecurity certifications simple. The device-based application monitors devices for vulnerabilities, helping to deliver continuous compliance and security. You gain peace of mind with real-time reporting and remediation through the CyberSmart dashboard.

## The challenges CyberSmart solves

The cybersecurity landscape is continually changing and cyberattacks never remain the same, constantly evolving in sophistication. Cybersecurity is layered, which can present challenges when it comes maintaining an optimum level of security and compliance.

The government's Cyber Essentials scheme outlines the basic cybersecurity measures that all end users should have in place. Cyber Essentials helps to prevent or mitigate around 99.8% of the most common cyberattacks.

CyberSmart's agent monitors the layers of the Cyber Essentials framework, and alerts when any device falls out of compliance. An effective monitoring tool, CyberSmart reports back every 15 minutes, providing complete visibility of your devices, software and compliance. This monitoring and reporting means the process of achieving Cyber Essentials certification is made much easier and quicker, with businesses able to demonstrate a good level of cyber hygiene.
