

Why Hornet?

Hornetsecurity offers comprehensive security solutions in three key ways: email security and compliance, email productivity and as a backup solution. Hornetsecurity's high level protection of IT infrastructure is user friendly, simple to use and is a leading solution in next generation cloud-based security. Their 365 Total Protection product is the most comprehensive cloud security solution for Microsoft 365 (M365) available in the market.

The challenges Hornetsecurity solves

Email security can be complex and with email used as a gateway to some of the most common cyberthreats like phishing, it's vital to ensure users are protected and secure. Email downtime can have a huge impact on any business which is why Hornetsecurity covers these critical areas of security.

The email security and compliance services encompass Advanced Threat Protection (ATP), spam and malware protection, and email encryption. Email productivity services such as continuity service and signature and disclaimer and archiving products complement the email security, meaning your business can operate to its fullest potential. Finally, Hornetsecurity's backup solution for the entire M365 infrastructure safeguards files, mailboxes and teams chats, ensuring they are backed up and restored frequently.

Benefits of Hornetsecurity

Email encryption

One click email recovery

Direct integration with M365
