

Keeper battlecard

Company overview

- Keeper is a next-generation password management solution built on a foundation of zero-trust and zero-knowledge security.
- Keeper protects every user on every device.

Product

Keeper stores passwords securely and keeps your business protected.

- Simple password management on unlimited devices
- Secure password storage in a personalised, encrypted vault
- High-strength, randomly generated passwords
- Easy to use, simple design

Benefit

- Easy set up – Keeper is straightforward to roll out to all users on every device
- Secure sharing – strong passwords can be securely shared on demand
- Peace of mind – every employee gets Keeper on unlimited devices
- Threat detection – Keeper scans vaults for passwords exposed on the dark web and notifies users to take action

	KEEPER	1Password	LastPass	Dashlane	N-Able Passport
G2	4.7	4.7	4.4	4.5	4.0
Mac App Store	4.9	3.4	4.4	4.8	1.6
Google Play App Store	4.6	3.7	3.7	4.6	2.0
Chrome Extension	4.8	2.7	4.3	4.7	3.1

Keeper vs 1Password

Keeper is simpler to set up, more user friendly and is more secure than 1Password.

Keeper vs LastPass

Keeper is more securely architected meaning it cannot experience the same cyberattacks that LastPass has been affected by. LastPass only supports encryption at the vault level.

Keeper vs Dashlane

Keeper is a more secure option than Dashlane. It's easier to use and has more features for users including a desktop application for all users with their own private vaults.

Keeper vs N-Able Passport

More highly rated than N-Able Passport, Keeper offers user more core features and functionality including dark web monitoring.

Objection handling

Has Keeper ever been breached?

No. Using a zero trust, zero knowledge system, all encryptions and decryption happens on your device when logged into the vault. The user is the only person who can encrypt and decrypt data.

Google password manager stores my passwords, isn't this the same thing?

No. Keeper is zero trust and zero knowledge – meaning no one but the end-user can access their vault, not even Keeper's own employees.

There are cheaper password managers out there, why should I pay more for Keeper?

Keeper is the highest rated solution compared to other competitors, offering superior features, functionality and security across the board.
