

Why Redstor?

Redstor delivers comprehensive backup and recovery of data for any business. The innovative solutions allow you to stay ahead of threats through AI-powered malware detection and the intuitive platform streamlines data protection, keeping your data safe and accessible in the event of it ever being compromised.

Redstor is quick to set up and requires no hardware which means you can benefit from its backup and recovery capabilities fast without disruption to your business operations. One of the key features of Redstor is their Entra ID backup and recovery which addresses the critical protection gaps in Entra ID built-in safeguards. The solution ensures that your data is stored safely and can be fully restored in seconds if ever required.

Challenges Redstor solves

Ensuring data is secure is critical for any business, which is why implementing a reliable backup and recovery solution is key. If your data is ever lost or compromised through a cyberattack, system failure or genuine human error, it can cause significant disruption. Redstor solves this. Its backup and recovery solution provides complete peace of mind. Through Redstor, data is stored securely and its intuitive platform continuously evolves to provide better protection, providing a reliable and innovative backup solution. Having the ability to recover data quickly and address issues effectively means you can minimise downtime and remain compliant with global regulations at all times.

Benefits of Redstor

Keep data secure across your entire network

Secure and protect your Entra ID environment

Accomplish secure recoveries, spot gaps in protection and identify sensitive data areas

In the event of data disruption, it restores systems quickly with Instant Data[™] technology

The single platform makes backup, recovery and data management simple

Risks can be identified and neutralised quickly with AI-powered malware detection

Achieve unified data protection for all your infrastructure and cloud environments (including: Microsoft 365, Google Workspace, Azure, Entra ID, Xero and Salesforce)
